- Q&A

# Introduction

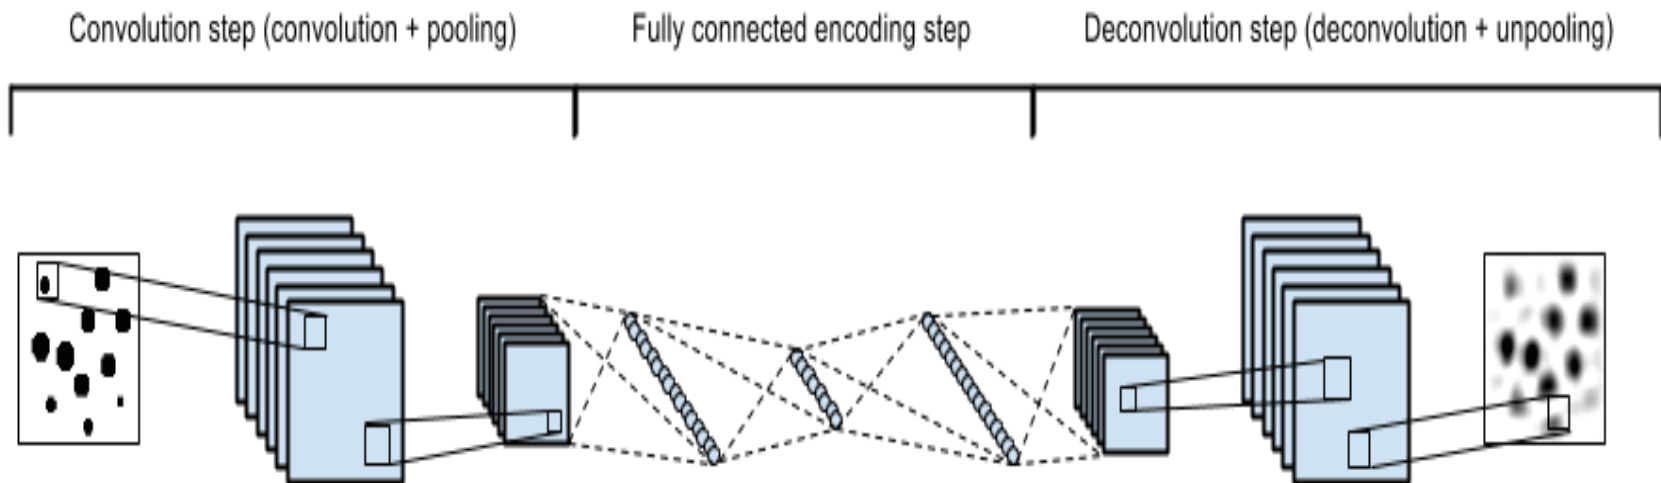

# What is autoencoder ?

# NN & AE & SAE

# What is CAE?

# Keys to implement

- Deconvolution

- Unpooling

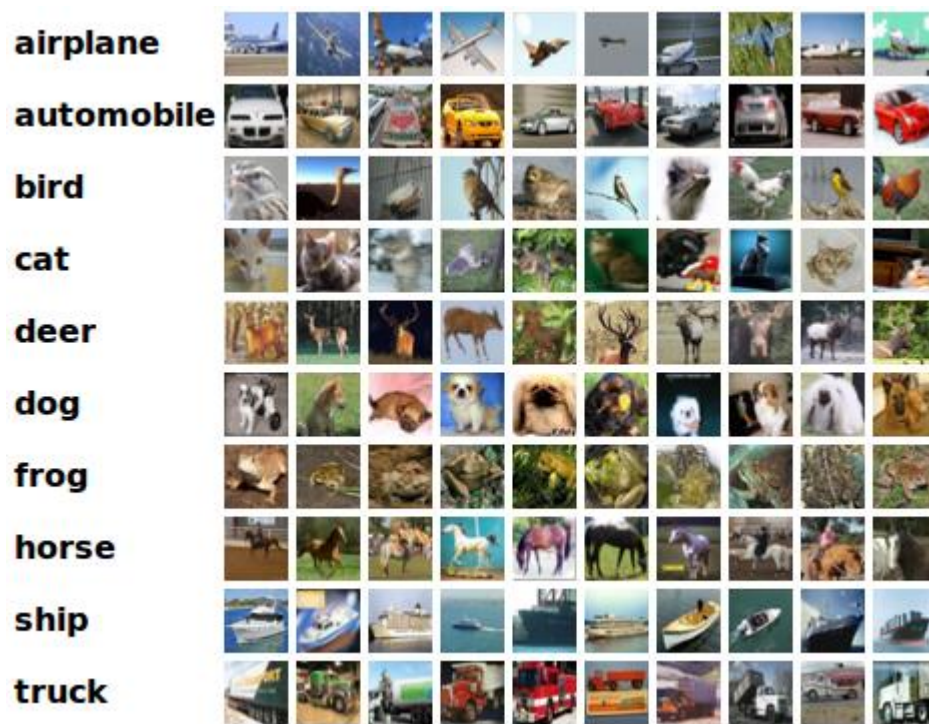

# Experiments

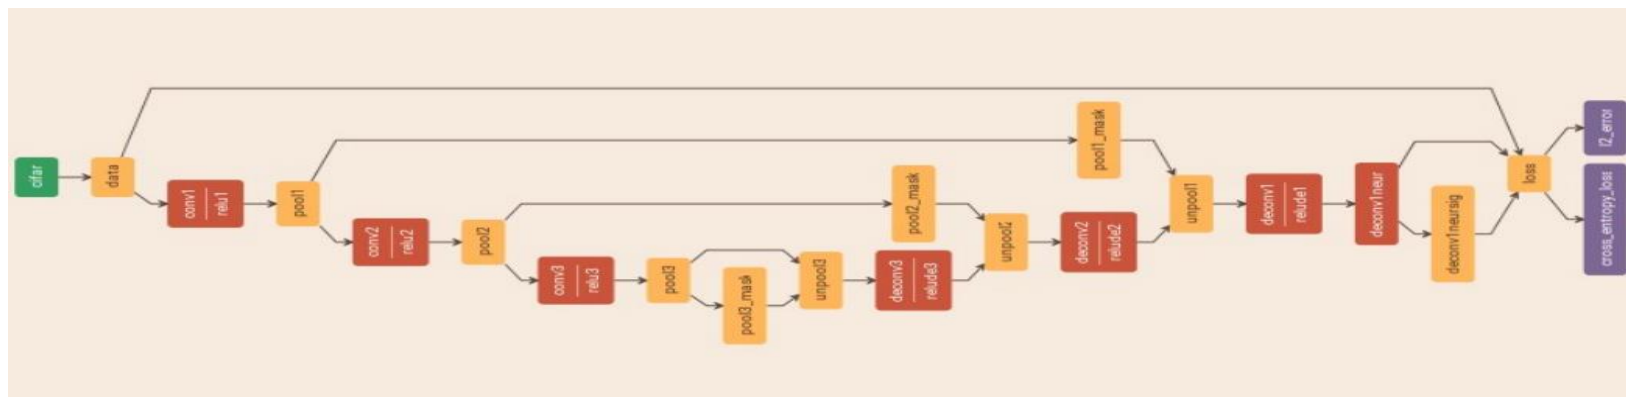

# Toy examples

- Dataset: cifar10

# Experiments details

- CAE architecture

Encoder	Conv1	Pool1	Conv2	Pool2	Conv3	pool3
Filter	64*5*5	2*2	32*3*3	2*2	16*3*3	2*2
Stride	1	2	1	2	1	2
Pad	2		1		1	
Decoder	Unpool3	Deconv3	Unpool2	Deconv2	Unpool1	Deconv1
Filter	2*2	16*3*3	2*2	32*3*3	2*2	64*5*5
Unpool_size	8		16		32	

# Representation result

# Experiments on WHOI

- Architecture

- Solver

- learning rate: 0.001; solver type: Adam; momentum: 0.9 ;  
weight\_decay:0.0005; loss function: euclideanloss, cross\_entropy\_loss.

# Results and analysis

Origin image

Reconstruction image

# Insights

- On small class(Akashiwo)

**Only 4 images in training dataset**

- Large class(dino30)

**43903 images in training dataset**

# Shape alike classes

- Transferable
  - On mnist dataset

- On Kaggle

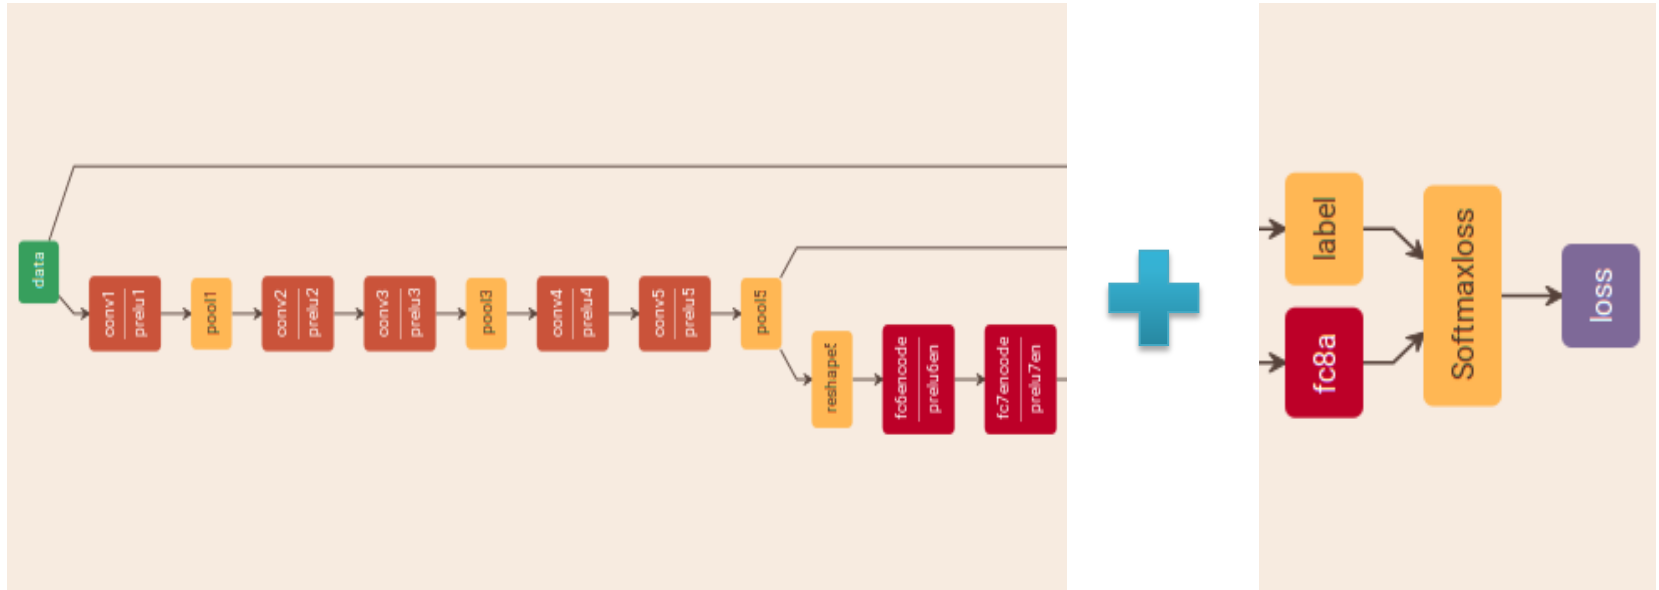

- On imagenet

# Fc encoder & decoder

# Classification result

Database	Model	Accuracy	F1 score
<b>Full</b> +Sample	<b>CAE(encode)</b>	<b>0.8530</b>	<b>0.2128</b>
Sample	Cifar10 net	0.8271	0.3086
Sample	Alexnet	0.8807	0.4211
Sample	Vgg16	0.8972	0.4919

# Encode visualization(T-SNE)

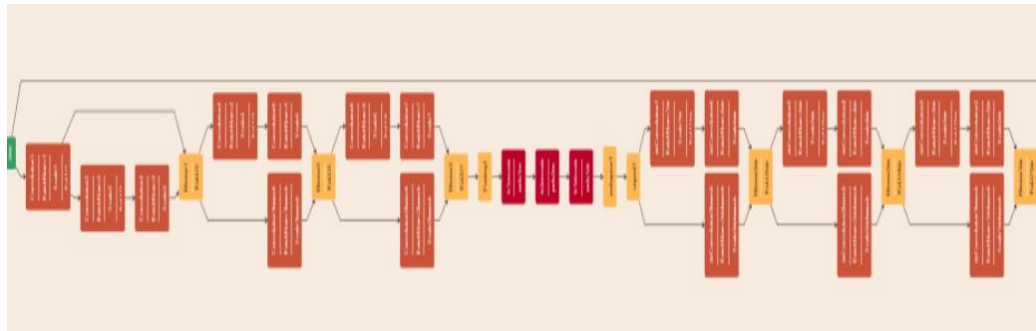

- 3D 2D

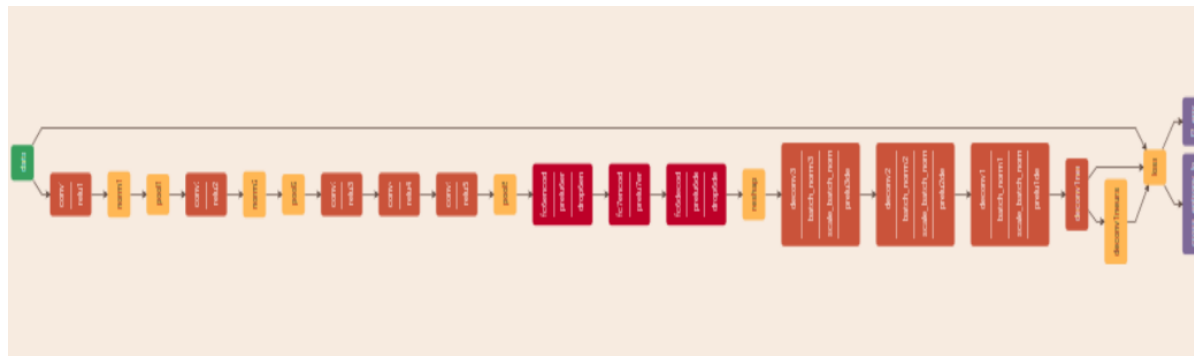

- Tools: <http://projector.tensorflow.org/>

# CAE && beyond

- Program1 (based on resnet)

- Program2 (general encode decode)

# Experiment result

- General encode & decode (alexnet + decode)

dataset	accuracy	precision	recall	F1 score
sample	0.886216	0.3765	0.5961	0.4110

# Why not work well?

- Mix classes
- Fine-grained challenge
- Unsupervised learning (clustering)

# What's Next

- Shallow CAE + general CNN
- CAE (Another architecture)
- Data enhancement (Use DCGAN)

# Q & A
